The Morningstar US Insurance Tactical Allocation Category refers to funds that actively shift their asset allocation between stocks and bonds, aiming to benefit from short-term market trends and potentially generate higher returns than static allocation funds. These funds are characterized by material shifts in sector and/or regional allocations over time.

The fund is an investment vehicle for variable annuity contracts and may be subject to fees or expenses that are typically charged by these contracts. Please review the insurance contract prospectus for further description of these fees and expenses. This product is available as a subaccount investment to a variable life insurance policy only and is not offered directly to the general public. The below table describes the annual operating expenses that you pay indirectly if you invest in the Fund through your retirement plan or if you allocate your insurance contract premiums or payments to the Fund. However, each insurance contract and separate account involves fees and expenses that are not described here. If the fees and expenses of your insurance contract or separate account were included in this table, your overall expenses would be higher. You should review the insurance contract prospectus for a complete description of fees and expenses.

Important Risk Information

Investors should carefully consider the investment objectives, risks, charges, and expenses of the Donoghue Forlines Dividend VIT Fund. This and other information about the Fund is contained in the prospectus and should be read carefully before investing. The prospectus can be obtained by calling toll free 1-877-779-7462. The Donoghue Forlines Dividend VIT Fund is distributed by Northern Lights Distributors, LLC. Member FINRA/SIPC. Donoghue Forlines LLC is not affiliated with Northern Lights Distributors, LLC.

As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. The net asset value of the Fund will fluctuate based on changes in the value of the equity securities in which it invests. Hedging strategies may not perform as anticipated by the adviser and the Fund could suffer losses by hedging with underlying money market funds if stock prices do not decline. If money market funds are utilized, such Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in Underlying Funds and may be higher than other mutual funds that do not invest in Underlying Funds. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Diversification does not ensure a profit or guarantee against loss. There is no guarantee that underlying holdings will continue to pay dividends. Large-cap companies may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes, and also may not be able to attain the higher growth rate of successful smaller companies, especially during extended periods of economic expansion.

The Dividend Index, and consequently the Fund, may not succeed in its objective and may not be optimal in its construction, causing losses to the Fund. The Fund's investments may be focused in securities of a particular sector from time to time. Economic, legislative or regulatory developments may occur that significantly affect the sector. This may cause the Fund's net asset value to fluctuate more than that of a fund that does not focus in a particular sector or sectors. The fund may engage in frequent buying and selling of portfolio securities resulting in a higher turnover rate. Donoghue Forlines Dividend Fund tracks a proprietary index identified in the Fund's prospectus. One cannot invest directly in an index. The index is a rules-based index, which reflects the theoretical performance an investor would have obtained had it invested in the manner shown and does not represent returns actually obtained and does not represent returns an investor actually attained, as investors cannot invest directly in an index. No representation is being made that any client will or is likely to achieve results similar to those presented herein. The index performance includes the reinvestments of all dividends and distributions. Past performance is no guarantee of future results or returns.

The inclusion of the Syntax US Large Cap 500 Index is for comparison purposes only. The Syntax US LargeCap 500 Index is a float market capweighted index that tracks the performance of the 500 largest publicly traded US companies. It is designed to provide a benchmark for the largecap investible US market. The index is rebalanced quarterly and its constituents are subject to liquidity screens and rank buffers.

The inclusion of the Syntax US Net Value Index is for comparison purposes only. The Syntax US Net Value Index is a financial index that tracks the net asset value (NAV) of a portfolio. It is a measure of the overall value of the assets held within the index, and it can be used as a benchmark for investment performance or to track a specific investment strategy.

The inclusion of the US Insurance Tactical Allocation Morningstar Category is for comparison purposes only. The US Insurance Tactical Allocation refers to funds that actively shift their asset allocation between stocks and bonds, aiming to benefit from short-term market trends and potentially generate higher returns than static allocation funds. These funds are characterized by material shifts in sector and/or regional allocations over time.

Definitions: **Tactical overlay** is a technique that uses trend following technical indicators to modify a portfolio's risk and return characteristics. **Alpha** refers to an investment's excess return relative to a benchmark index or market average. **Beta** is a measure of an investment's volatility (risk) compared to the overall market. **Max drawdown** is defined as the largest percentage decline an investment experience from its peak value to its lower value before it recovers to that peak again. **Standard deviation** is a statistical measure that indicates how much an investment's return deviates from its average return over a period. **Up capture ratio** is a financial metric used to access how well an investment performs relative to a benchmark index during periods when the market is rising. **Down capture ratio** measures how well an investment manager performs relative to a benchmark index during periods of market decline. **Volatility** refers to the degree of fluctuation or uncertainty in the price of an asset over a specific period.
