The Morningstar US Insurance Tactical Allocation Category refers to funds that actively shift their asset allocation between stocks and bonds, aiming to benefit from short-term market trends and potentially generate higher returns than static allocation funds. These funds are characterized by material shifts in sector and/or regional allocations over time.

The fund is an investment vehicle for variable annuity contracts and may be subject to fees or expenses that are typically charged by these contracts. Please review the insurance contract prospectus for further description of these fees and expenses. This product is available as a subaccount investment to a variable life insurance policy only and is not offered directly to the general public. The below table describes the annual operating expenses that you pay indirectly if you invest in the Fund through your retirement plan or if you allocate your insurance contract premiums or payments to the Fund. However, each insurance contract and separate account involves fees and expenses that are not described here. If the fees and expenses of your insurance contract or separate account were included in this table, your overall expenses would be higher. You should review the insurance contract prospectus for a complete description of fees and expenses.

Risk-Reward

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1 Shares
Management Fees	1.00%
Distribution & Shareholder Service (12b-1) Fees	0.25%
Other Expenses	0.31%
Total Annual Fund Operating Expenses	1.56%

Important Risk Information

Investors should carefully consider the investment objectives, risks, charges, and expenses of the DF Tactical Momentum VIT Fund. This and other information about the Fund is contained in the prospectus and should be read carefully before investing. The prospectus can be obtained by calling toll 1-877-779-7462. The DF Tactical Momentum VIT Fund is distributed by Northern Lights Distributors, LLC. Member FINRA/SIPC. Donoghue Forlines LLC is not affiliated with Northern Lights Distributors LLC.

As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. The net asset value of the Fund will fluctuate based on changes in the value of the equity securities in which it invests. Hedging strategies may not perform as anticipated by the adviser and the Fund could suffer losses by hedging with underlying money market funds if stock prices do not decline. If money market funds are utilized, such Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in Underlying Funds and may be higher than other mutual funds that do not invest in Underlying Funds. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Diversification does not ensure a profit or guarantee against loss. Large-cap companies may be unable to respond quickly to new competitive challenges, such as changes in technology and consumer tastes, and also may not be able to attain the higher growth rate of successful smaller companies, especially during extended periods of economic expansion.

The Index, and consequently the Fund, may not succeed in its objective and may not be optimal in its construction, causing losses to the Fund. The Fund's investments may be focused in securities of a particular sector from time to time. Economic, legislative or regulatory developments may occur that significantly affect the sector. This may cause the Fund's net asset value to fluctuate more than that of a fund that does not focus in a particular sector or sectors. The fund may engage in frequent buying and selling of portfolio securities resulting in a higher turnover rate. DF Tactical Momentum VIT Fund tracks a proprietary index identified in the Fund's prospectus. One cannot invest directly in an index. The Index is a rules-based index, which reflects the theoretical performance an investor would have obtained had it invested in the manner shown and does not represent returns actually obtained and does not represent returns an investor actually attained, as investors cannot invest directly in an index. No representation is being made that any client will or is likely to achieve results similar to those presented herein. The index performance includes the reinvestments of all dividends and distributions. Past performance is no guarantee of future results or returns.

The inclusion of the **Syntax US Large Cap 500 Index** is for comparison purposes only. The **Syntax US LargeCap 500 Index** is a float market capweighted index that tracks the performance of the 500 largest publicly traded US companies. It is designed to provide a benchmark for the largecap investible US market. The index is rebalanced quarterly and its constituents are subject to liquidity screens and rank buffers.

The inclusion of the **US Insurance Tactical Allocation Morningstar Category** is for comparison purposes only. The **US Insurance Tactical Allocation** refers to funds that actively shift their asset allocation between stocks and bonds, aiming to benefit from short-term market trends and potentially generate higher returns than static allocation funds. These funds are characterized by material shifts in sector and/or regional allocations over time.

Definitions: **Tactical overlay** is a technique that uses trend following technical indicators to modify a portfolio's risk and return characteristics. **Alpha** refers to an investment's excess return relative to a benchmark index or market average. **Beta** is a measure of an investment's volatility (risk) compared to the overall market. **Max drawdown** is defined as the largest percentage decline an investment experience from its peak value to its lower value before it recovers to that peak again. **Risk adjusted momentum** refers to momentum strategies that incorporate a measure of volatility or risk into the calculation of a momentum score. **Standard deviation** is a statistical measure that indicates how much an investment's return deviates from its average return over a period. **Up capture ratio** is a financial metric used to access how well an investment performs relative to a benchmark index during periods when the market is rising. **Down capture ratio** measures how well an investment manager performs relative to a benchmark index during periods of market decline. **Volatility** refers to the degree of fluctuation or uncertainty in the price of an asset over a specific period.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

In July 2026, Morningstar published its star rating for periods ended June 30, 2026. Morningstar calculated the Overall Rating for the DF Tactical Momentum VIT Fund as five stars based on the fund's risk-adjusted return from its inception (May 1, 2007) through June 30, 2026. Overall 5 star rating out of 225 US Insurance Tactical Allocation funds as of June 30, 2026. A 3-Year 5 star rating out of 225 US Insurance Tactical Allocation funds as of June 30, 2026. A 5-Year 5 star rating out of 202 US Insurance Tactical Allocation Funds as of June 30, 2026. Morningstar ratings are determined monthly and the DF Tactical Momentum VIT Fund may receive a different rating in the future. Please contact us at 800-642-4276.
