Important Risk Information

Investors should carefully consider the investment objectives, risks, charges, and expenses of the DF Tactical Income Fund. This and other information about the Fund is contained in the prospectus and should be read carefully before investing. The prospectus can be obtained by calling toll free 1-877-779-7462. The DF Tactical Income Fund is distributed by Northern Lights Distributors, LLC. Member FINRA/SIPC. Donoghue Forlines LLC is not affiliated with Northern Lights Distributors, LLC.

As with all mutual funds, there is the risk that you could lose money through your investment in the Fund. The net asset value of the Fund will fluctuate based on changes in the value of the equity securities in which it invests. Hedging strategies may not perform as anticipated by the adviser and the Fund could suffer losses by hedging with underlying money market funds if stock prices do not decline. If money market funds are utilized, such Underlying Funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in Underlying Funds and may be higher than other mutual funds that do not invest in Underlying Funds. Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Diversification does not ensure a profit or guarantee against loss. Underlying funds and ETFs are subject to investment advisory fees and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing in the Fund will be higher than the cost of investing directly in other mutual funds and ETFs and may be higher than other mutual funds that invest directly in fixed income securities and equities. When the Fund invests in fixed income securities, the value of the Fund will fluctuate with changes in interest rates. Defaults by fixed income issuers in which the Fund invests will also harm performance. Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Lower-quality bonds, known as “high yield” or “junk” bonds, are speculative and present greater risk than bonds of higher quality, including an increased risk of default. An economic downturn, period of rising interest rates, or lack of liquid market for these bonds could decrease the Fund’s share price. International markets present special risks including currency fluctuation, the potential for diplomatic and politically instability, regulatory and liquidity risks, foreign taxation and differences in auditing and other financial standards. The fund has investment exposure to short-term US Treasury securities. All money market instruments can change in value in response to changing interest rates which will affect share prices. An investment in the Fund is neither insured nor guaranteed by the Federal Deposit Insurance Corporation, US government or any other government agency.

The inclusion of the **Bloomberg Global Aggregate Index** is for comparison purposes only. The **Bloomberg Global Aggregate Index**, or “the Agg”, is a broad-based fixedincome index used by bond traders and managers of mutual funds and exchange-traded funds (ETFs) as a benchmark to measure their relative performance.

The inclusion of the **US Fund Nontraditional Bond Morningstar Category** is for comparison purposes only. The **Nontraditional Bond Category** contains funds that pursue strategies divergent in one or more ways from conventional practice in the broader bond-fund universe.

Definitions: **Tactical overlay** is a technique that uses trend following technical indicators to modify a portfolio’s risk and return characteristics. **Alpha** refers to an investment’s excess return relative to a benchmark index or market average. **Beta** is a measure of an investment’s volatility (risk) compared to the overall market. **Max drawdown** is defined as the largest percentage decline an investment experience from its peak value to its lower value before it recovers to that peak again. **Standard deviation** is a statistical measure that indicates how much an investment’s return deviates from its average return over a period. **Up capture ratio** is a financial metric used to access how well an investment performs relative to a benchmark index during periods when the market is rising. **Down capture ratio** measures how well an investment manager performs relative to a benchmark index during periods of market decline. **Volatility** refers to the degree of fluctuation or uncertainty in the price of an asset over a specific period.
